Release Notes

Newspaper Solution Pack

This new solution pack allows for the creation of newspaper, issue, and page objects. It is based on the same paged content and OCR infrastructure as book objects, with a special display designed to handle the article/issue/page structure of newspaper and a clipping tool for taking cropped screenshots of individual articles.

Batch Module

The batch ingest framework is now accessible via Drush.

Book Batch

A graphical user interface is available for batch ingestion of books.

IP Embargo

This new tool allows site admins to limit object access by IP range (not integrated with the Islandora Embargo module).

Compound Solution Pack

A new solution pack to create compound objects using objects created with any other Islandora solution pack by enabling a generic parent-child relationships between objects. The object view of a compound object is replaced by the view of its first child object. The included "Islandora Compound Object Navigation" block provides a thumbnail navigation of an object's siblings.

UUID PID Generator

Accessible via the Islandora configuration panel, this new function generates Fedora object PIDs with version 4 UUIDs.

XACML Editor and API

The Islandora XACML Editor provides a graphical user interface to edit XACML policies for objects in a repository or collection. This release brings this tool out of beta.

Infrastructure Improvements

- Improved Drupal coding standards compliance
- Introduced automated testing into many modules
- Implemented Travis-CI on most repositories

Known Issues
