Compound Solution Pack

Overview

The Compound Solution pack module adds the ability to create compound objects using objects created with any other Islandora solution pack by enabling a generic parent-child relationships between objects. The object view of a compound object is replaced by the view of its first child object. The included "Islandora Compound Object Navigation" block provides a thumbnail navigation of an object's siblings. A "Compound" management tab allows for the addition and removal of parent and child objects for each object.

Configuration options are available through the Compound objects administrative menu (admin/islandora/compound_object)

Content Models, Prescribed Datastreams and Forms

The Compound Solution Pack comes with the following objects in http://**path.to.your.site**/admin/islandora/solution_packs:

- Islandora Compound Object Content Model (islandora:compoundCModel)
- Compound Collection (islandora:compound_collection)

An image object created using the Compound Solution Pack's content model will have the following datastreams:

RELS-EXT	Default Fedora relationship metadata

MODS	MODS record, created at time of ingest
DC	Dublin Core record
TN	Thumbnail image, created at time of ingest

The Compound Solution Pack comes with the Compound Object MODS form.
