# Vagrant

Vagrant is a tool for configuring virtual machines.

The VIVO apps and tools working group is working on a virtual machine for VIVO configured through Vagrant.  An initial version is available on Github .  Its based on an Ubuntu Precise 64 server base box.  It has been tested and works with VirtualBox on both Mac and Windows 7 host operating systems.  If you have questions or comments, feel free to open an issue on the Github project.
