## Fedora 3.7.1 Release Notes

**Release Date:** 29 October 2013

The Fedora 3.7.1 release addresses a critical vulnerability. **It is highly recommended that all users of the 3.x series upgrade to 3.7.1.**

### Downloads

The binaries for this release may be downloaded on [Sourceforge](#) or from [Maven Central](#). The project may be built from source at [GitHub](#).

### Contributors

The Fedora Commons project would not be possible without the support of its community. In particular, this release is indebted to the following individuals and institutions for contributions:

- Benjamin Armintor, Columbia University
- Mike Durbin, University of Virginia
- Scott Prater, University of Wisconsin

### Special Note

**Fedora 3.7.1 introduces a new table to the backing database: `fcrepoRebuildStatus`.** This table will be populated automatically on installations from the installer, but will be absent if the 3.7.1 jars are simply "dropped in" to an existing, unpacked web app. If that is the upgrade procedure required, this table must either be created externally to Fedora following the dbspec, or Fedora must be restarted with the filesystem flag indicating non-new installs removed. The latter will result in the removal and re-ingest of the 4 core Fedora system objects.

## Fedora 3.7.0 Release Notes

**Release Date:** September 19, 2013

Fedora 3.7.0 is a release with bug fixes and some improvements. The principal goals of the release are compatibility with JDK 7 (now the target platform) and upgrades of library dependencies to the most modern versions possible for stability as development effort on Fedora shifts towards Fedora 4. All current users are recommended to upgrade to 3.7.0.

### Downloads

The binaries for this release may be downloaded on [Sourceforge](#).

## Contributors

The Fedora Commons project would not be possible without the support of its community. In particular, this release is indebted to the following individuals and institutions for contributions:

- Benjamin Armintor, Columbia University
- Frank Asseg FIZ Karlsruhe
- Jesper Damkjaer, DMC
- Thomas Pii, DMC
- Scott Prater, University of Wisconsin
- Edwin Shin, Data Curation Experts
- Adam Soroka, University of Virginia

With special thanks to Columbia University for donating personnel time to managing the release.

## Special Note

**Fedora 3.7.0 was built and distributed on the Java 7 platform. Testing indicates that the source code is backwards-compatible with Java 6, but that will require building the project from source. Please see [here](#) for information about the EOL process for Java. The source code for the project is available on [Github](#).**

You are encouraged to download this new release and give it a spin. Please let us have your comments and feedback via the mailing lists, and of course please let us know of any problems you discover.

For a detailed list of bug fixes and improvements comprising this release see the table below
