

# Command Line Operations

- 1 [Executing command line operations](#)
- 2 [Available operations](#)
  - 2.1 [General use](#)
  - 2.2 [Legacy statistics](#)
  - 2.3 [SOLR Statistics](#)

The DSpace command launcher or CLI interface offers the execution of different maintenance operations. As most of these are already documented in related parts of the documentation, this page is mainly intended to provide an overview of all available CLI operations, with links to the appropriate documentation.

## Executing command line operations

The CLI interface is found at `[dspace]/bin/dspace`. Execute it without arguments or with the `-h` option to see all available operations. Execute `dspace op -h` to see details about the `op` operation.

Examples:

<code>bin/dspace -h</code>
<code>bin/dspace cleanup -h</code>
<code>bin/dspace cleanup</code>
<code>bin/dspace cleanup --verbose</code>

## Available operations

### General use

- [checker](#): Run the checksum checker
- [checker-emailer](#): Send emails related to the checksum checker
- [classpath](#): Calculate and display the DSpace classpath
- [community-lifter](#): Tool to manage community and sub-community relationships
- [create-administrator](#): Create a DSpace administrator account
- [curate](#): Perform curation tasks on DSpace objects
- [doi-organisier](#): Transmit information about DOIs to the registration agency.
- [dsprop](#): View a DSpace property from `dspace.cfg`
- [dsrun](#): Run a class directly
- [embargo-lifter](#): Pre DSpace 3.0 embargo manager tool used to check, list and lift embargoes
- [export](#): Export items or collections
- [filter-media](#): Perform the media filtering to extract full text from documents and to create thumbnails
- [generate-sitemaps](#): Generate search engine and html sitemaps
- [harvest](#): Manage the OAI-PMH harvesting of external collections
- [import](#): Import items into DSpace
- [index-db-browse](#): General index command (requires extra parameters)
- [index-discovery](#): Update Discovery Solr Search Index
- [index-lucene-init](#): Initialise the search and browse indexes
- [index-lucene-update](#): Update the search and browse indexes
- [itemcounter](#): Update the item strength counts in the user interface
- [itemupdate](#): Item update tool for altering metadata and bitstream content in items
- [make-handle-config](#): Run the handle server simple setup command
- [metadata-export](#): Export metadata for batch editing
- [metadata-import](#): Import metadata after batch editing
- [migrate-embargo](#): Embargo manager tool used to migrate old version of Embargo to the new one included in `dspace3`
- [oai](#): OAI script manager
- [packager](#): Execute a packager
- [read](#): execute a stream of commands from a file or pipe
- [registry-loader](#): Load entries into a registry
- [setup-database](#): Create the database tables
- [structure-builder](#): Build DSpace community and collection structure
- [sub-daily](#): Send daily subscription notices
- [test-database](#): Test the DSpace database connection
- [test-email](#): Test the DSpace email server settings are OK
- [update-handle-prefix](#): Update handle records and metadata when moving from one Handle prefix to another
- [user](#): Create, List, Update, Delete EPerson (user) records
- [version](#): Show DSpace version and other troubleshooting information

for this script have been reported:

Unable to locate Jira server for this

## Legacy statistics

- stat-general: Compile the general statistics
- stat-initial: Compile the initial statistics
- stat-monthly: Compile the monthly statistics
- stat-report-general: Create the general statistics report
- stat-report-initial: Create the initial statistics report
- stat-report-monthly: Create the monthly statistics report

## SOLR Statistics

Scripts for the statistics that are stored in SOLR, added in DSpace 1.6.

- [stats-log-convert](#): Convert dspace.log files ready for import into solr statistics
- [stats-log-importer](#): Import previously converted log files into solr statistics
- [stats-log-importer-elasticsearch](#): Import solr-format converted log files into Elastic Search statistics
- [stats-util](#): Statistics Client for Maintenance of Solr Statistics Indexes
