

# DSpace 4.0 Tasks

This page will serve as a place to list tasks that need to be completed as part of the DSpace 4.0 release process.

This page may be out of date

This page is updated manually. Therefore it may be out of date at any given time.  
PRs linked to a GitHub Milestone

Tim Donohue has very kindly linked the Pull Requests detailed below in a GitHub Milestone for [DSpace 4.0 Feature Freeze](#). It's a very helpful way to review all the Pull Requests approved for inclusion in DSpace 4.0, and to follow the progress of their merge into the DSpace code base.

## 4.0 Code Tasks

- Due to migration to Discovery, mark the DB and Lucene classes it replaces as deprecated. This includes things like IndexBrowse, BrowseCreateDAOPostgres, DSIndexer and others (check their packages).
- Review all dependencies and determine if we need to increase the version we're using. Here's a [list of dependencies with updates](#).
- Review recommendations for other software versions we require (i.e. review our recommended stack).

## 4.0 Documentation Tasks

- [Installation Documentation](#) needs a check
- [Configuration Documentation](#) needs a quick check. Especially with the new JSPUI redesign.
- We need an Upgrade from 3.x to 4.x page added under [Upgrading a DSpace Installation](#) & instructions added there.
- Update the Official Documentation's [Release Notes](#) page for 4.0 (*especially try to update the list of contributors*)
- Make sure all issues [fixed for 4.0](#) have documentation (optional – this is really hard to review in bulk like this - Tim)
- Make sure all issues with the [changes-config](#) label have their configuration changes documented
- Make sure all highlighted features listed on the [DSpace Release 4.0 Status](#) are linked to their new/updated documentation (also ensures they each have docs)

## 4.0 Testathon Tasks

- Release 4.0RC1 via Maven
- Update [demo.dspace.org](#) with the 4.0RC1 Release (once it appears in Maven Central). See [demo6.dspace.org Notes](#) for hints on how to update.
- Update the [DSpace Release 4.0 Status](#) page. Try and create a simple table/list of the main features that people should expect & look to test. Use the [DSpace Release 3.0 Notes](#) as a good example.
- Announce Testathon start & all available test servers, etc.
  - May want to optionally create a Testathon Wiki page under the [DSpace Release 4.0 Status](#), similar to the [DSpace Release 1.8.0 Testathon Page](#)

# Pull Requests reviewed for inclusion in DSpace 4.0

NOTE, this table started out as a Google Doc spreadsheet, here: <https://docs.google.com/spreadsheet/ccc?key=0AimboW73gZRJdEVkdUdxR2Nac0JqeXA1QmRBcmIRbHc#gid=0>

| <a href="https://github.com/dspace/dspace/pull/323">https://github.com/dspace/dspace/pull/323</a> | [DS-1657] DSpace REST API built in JERSEY                                          | I have built a REST-API for DSpace, built using JAX-RS1 (JERSEY). [DS-1657 Request for Official DSpace REST API]( <a href="https://jira.duraspace.org/browse/DS-1657">https://jira.duraspace.org/browse/DS-1657</a> ) * It is READ-ONLY * Respects DSpace Authorization * Only lists or shows objects that anonymous user has READ access to. * Hides hidden metadata from Items, i.e. provenance * Should support either DB It has support for endpoints: * / - Index of Endpoints * /communities - Community (list and specific) * /collections - Collection (list and specific) * /items - Item (specific) * /bitstreams - Bitstream (specific, and specific retrieve) * /handle - Handles (can look up a handle to see the internal ID) It gives responses in JSON, XML, and for a rare-few HTML. (Set your Accept header accordingly) In testing I have had: "" Accept: application/xml;q=0.5, application/json;q=0.6 "" , and tweaked preferences to get different response. ## Whats missing? * Pagination * I'm thinking I'll use ""limit"" and ""offset"" * Search * root-level Item list * root-level Bitstream list * Expand is not complete for Item / Bitstream * Going from an object to its Parent is not consistently implemented * No way to login or authenticate as a specified user * Can't recursively view every sub-sub-resource of a resource, you can see its direct children. ## What are the surprises? * If you don't have READ access to an object it does not show up in list * ---Looking up a handle does not give you EVERYTHING about that object, but gives you some data, and link to get more data.--- * Every object has a "link", a very weak attempt at HATEOS, you can always just to children /parent objects * Items have metadata array, that has field key and field value. * I have for some reason touched a few core dspace-api classes to add some sugar or simplify accomplishing things. Perhaps this is unnecessary, but I'd rather do things a right way, as opposed to yet-another-wrong-way. * Item metadata is using the deprecated DCValue[], which I saw no alternative to. * The link to an object type is using a pluralizer of that type, i.e. item -> items. This is all in [dspace-source] /dspace-rest. As this is still code that is being improved from time-to-time, feel free to review, give feedback, or fix it yourself. | peterdietz | 2013-10-07T21:57:44Z | 2013-10-09T14:40:19Z | null | clean | YES   pre-approve d to merge | feature |                                                                                                              |
| <a href="https://github.com/dspace/dspace/pull/321">https://github.com/dspace/dspace/pull/321</a> | [DS-1675] New JSPUI look & feel                                                    | <a href="https://jira.duraspace.org/browse/DS-1675">https://jira.duraspace.org/browse/DS-1675</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | lap82      | 2013-10-07T18:08:14Z | 2013-10-09T14:50:20Z | null | clean | YES   pre-approve d to merge | feature |                                                                                                              |

| <a href="https://github.com/dspace/dspace/pull/319">https://github.com/dspace/dspace/pull/319</a> | [DS-1687] Porting Item Versioning to the JSPUI                                     | Porting of the item level versioning as is at <a href="https://wiki.duraspace.org/display/DSDOC4x/Item+Level+Versioning">https://wiki.duraspace.org/display/DSDOC4x/Item+Level+Versioning</a> I'm try to manage the "Exposing version history" issue, in fact you find in this PR that the email of the editor is show only to admin user (Administrators and Collection/Community Administrators). Buttons to create new version and go to the history page has been added on the item splash page (display-item.jsp). PLEASE NOTE: to enable the feature turn on in the versioning.cfg the enabled configuration parameter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | lap82      | 2013-10-05T18:02:52Z | 2013-10-05T18:02:52Z | null | clean | YES   pre-approve d to merge | feature |                                                                                                              |
| <a href="https://github.com/dspace/dspace/pull/318">https://github.com/dspace/dspace/pull/318</a> | [DS-1688] Add UI support for BTE batch metadata import                             | Administrative UI support for BTE batch metadata import. The user can select the data file to upload, the type of the datafile (bibtex, csv, etc.) and the collection that the items should be imported to and then the BTE runs to import the data. Mapfile generated by the import is saved and the user is informed via email regarding the status of the import (like the export stuff...) The corresponding service is accessible via the administrative sidebar. This pull request is build based on the PR: <a href="https://github.com/dspace/dspace/pull/317">https://github.com/dspace/dspace/pull/317</a> Related Jira issue: <a href="https://jira.duraspace.org/browse/DS-1688">https://jira.duraspace.org/browse/DS-1688</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | kstamatis  | 2013-10-05T17:48:47Z | 2013-10-09T05:58:53Z | null | clean | skip   discuss               | feature | Bollini proposed to skip until next meeting, wants to understand interaction with all other changes to JSPUI |
| <a href="https://github.com/dspace/dspace/pull/317">https://github.com/dspace/dspace/pull/317</a> | [DS-1686] Support new version of Biblio-Transformation-Engine for the batch import | The new version v0.9 of BTE is out ( <a href="https://github.com/EKT/Biblio-Transformation-Engine">https://github.com/EKT/Biblio-Transformation-Engine</a> ). The current batch import (from BTE) code (+ the XML Spring configuration) needs to be updated to support this new version. DSpace documentation on batch import (from BTE) will also need an update. Related Jira issue: <a href="https://jira.duraspace.org/browse/DS-1686">https://jira.duraspace.org/browse/DS-1686</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | kstamatis  | 2013-10-04T20:41:50Z | 2013-10-09T05:45:11Z | null | clean | YES   pre-approve d to merge |         |                                                                                                              |
| <a href="https://github.com/dspace/dspace/pull/316">https://github.com/dspace/dspace/pull/316</a> | Create Spatial Index and Spatial Query                                             | The following code allows the indexing and querying on "spatial" metadata A resource may refer to a geographic area and this area can be defined in metadata as geographic bounding box (west edge , east edge , north edge , south edge ) ![image]( <a href="https://f.cloud.github.com/assets/2056790/1269750/6b16e2f4-2cfe-11e3-9a49-dd0470a0a0ed.png">https://f.cloud.github.com/assets/2056790/1269750/6b16e2f4-2cfe-11e3-9a49-dd0470a0a0ed.png</a> ) If an item's bounding box is present in metadata then it can be indexed and users can perform spatial queries (propably by selecting a geographic area on a map) to get results that refers to a specific geographic area. An implementation of this functionality can be found at the following link: <a href="http://geo-dspace.aegean.gr/xmlui/handle/123456789/4">http://geo-dspace.aegean.gr/xmlui/handle/123456789/4</a> How this works: User should create 4 custom metadata fields: [schema].GeographicBoundingBox.EastBoundLongitude [schema].GeographicBoundingBox.WestBoundLongitude [schema].GeographicBoundingBox.NorthBoundLongitude [schema].GeographicBoundingBox.SouthBoundLongitude (In a more abstract implementation the "spatial" metadata fields could be defined in dspace.cfg.) After an item is submitted Lucene creates Quadtree spatial index for this item. When the user perform a spatial search, he passes a bounding box to lucene which compares this with spatial indexes based on a spatial Operation . For example, if the spatial operation used is "intersect" then Lucene will return all items that their's bounding box intersects with user's passed bounding box. This requests contains modification only in dspace Kernel API. But there is a need for modifications in XMLUI API and stylesheets in order for this functionality to be fully operational Notes: Lucene supports spatial searches from 4 version This code was tested in Lucene 4.3.0 version The coordination System is WGS84                                                                                                                                                                                                                                                                                                                                                                                          | bbkopsas   | 2013-10-04T14:46:29Z | 2013-10-04T14:46:29Z | null | clean | NO   needs discussion        |         |                                                                                                              |
| <a href="https://github.com/dspace/dspace/pull/314">https://github.com/dspace/dspace/pull/314</a> | [DS-1683] Add spell checker to discovery                                           | Adds did you mean functionality to the XMLUI discovery view.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | KevinVdv   | 2013-10-04T08:40:56Z | 2013-10-04T08:40:56Z | null | clean | YES   pre-approve d to merge |         |                                                                                                              |

| <a href="https://github.com/dspace/dspace/pull/266">https://github.com/dspace/dspace/pull/266</a> | [DS-1188] Collection view doesn't show content by default                                                 | <a href="https://jira.duraspace.org/browse/DS-1188">https://jira.duraspace.org/browse/DS-1188</a> This is a pull request for the XMLUI version. The configuration on whether or not to use recent submissions on a collection home page was added to the discovery configuration spring file. I choose this route to keep all configuration together instead of spreading it out. On all pages where recent submissions are shown a link "show more" is displayed, so even if this option isn't enabled people will be able to browse through recent submission easily. Ps: This solution also required discovery to be enabled, but since it is the default for DSpace 4.0, I don't think this should be an issue (no use in doing double work). | KevinVdV      | 2013-08-05T09:49:13Z | 2013-09-04T20:47:45Z | null | dirty | NO   needs rebase           |         |                                     |

| <a href="https://github.com/dspace/dspace/pull/244">https://github.com/dspace/dspace/pull/244</a> | DS-1648<br>1) DSpace enhancement, mapping author names to registered users with UI options<br>2) Keeping UI option to choose author-wise Collections where the item can be mapped. | <a href="https://jira.duraspace.org/browse/DS-1648">https://jira.duraspace.org/browse/DS-1648</a> This commit tries to achieve following things: 1)Currently in DSpace, authors are present as just names. They are not mapped to the users registered to DSpace. If an organization wants to track which authors are which users for a submitted item where multiple authors are there or the submitter is not the author, there is no provision for that. This code would map the authors to the users with name matching. Now basic , first name, last name matching is done. Later it can be extended to add heuristic matchings and or plugging in Authorization control. The mapped users would be shown in submission workflow DescribeStep by checkboxes. The checked ones would be saved in item metadata as chosen-authors. All authors mapped as users would be kept as available-authors in item metadata. 2)The collections where the author-mapped-users have got submit authorization, would then be shown in the submission workflow with check boxes. Say AuthorName1 matched User1 and AuthorName2 mapped User2 and User1 has 3 collections where she can submit, and User2 has 1 collection where he can submit. The collections would then be shown in DescribeStep as User1: Col1 [], Col2 [], Col3 [], User2: Col4[]. Now submitter can chose Col2 and Col4 as the collections where the item should be mapped. So those two collection ids would be saved as chosen-collections in Item Metadata. Upon finishing the item submission , in InstallItem step the item would get mapped to chosen collection. The owning collection logic remains intact. To achieve this , new dspace core metadata fields are added and they are used in input-form with specific input-types. | alapchari     | 2013-06-29T11:20:11Z | 2013-09-04T20:27:22Z | null     | clean | NO   needs more work        |         |                                                                 |
| <a href="https://github.com/dspace/dspace/pull/232">https://github.com/dspace/dspace/pull/232</a> | [DS-1456] "dSPACE version" command-line script                                                                                                                                     | <a href="https://jira.duraspace.org/browse/DS-1456">https://jira.duraspace.org/browse/DS-1456</a> This introduces a new database table: a scratchpad for running webapps' presence records. It was the best I could think of that is visible from all webapps and the commandline, and requires no additional daemons or arcane JMX configuration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | mwoodiupui    | 2013-06-14T14:46:39Z | 2013-08-19T14:24:32Z | null     | clean | YES   pre-approved to merge |         |                                                                 |
| <a href="https://github.com/dspace/dspace/pull/230">https://github.com/dspace/dspace/pull/230</a> | Fix for Metadata Schema lookup by long namespace and not short name.                                                                                                               | Sometimes DSpace looks up a schema by the long namespace, and not the short name while serializing metadata for an Item. This causes metadata registered in DSpace through the UI metadata registry and present within an atom+xml document submitted via the Sword2 protocol, unable to be added. This patch fixes this issue. It also throws a RuntimeException (I didn't want to change the signature, so there could be a much better way to express this) when the schema is not available via either method. This alleviates the mystery of why DSpace can't find a defined symbol when parsing the metadata for an Item, as an Item with a bad reference to internal metadata should be recorded as an error. Sword2 protocol users will then know that something is wrong with the metadata in their document and be able to debug.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | awaterma      | 2013-06-06T17:42:56Z | 2013-08-28T20:54:58Z | null     | clean | NO   rejected               | feature |                                                                 |
| <a href="https://github.com/dspace/dspace/pull/331">https://github.com/dspace/dspace/pull/331</a> | Updated SWORdV2 module (was PR 229)                                                                                                                                                | This contribution provides major enhancements to the dspace-swordv2 module: - some general bug fixes including: bitstream url construction, config options, context management and connection pool, ORIGINAL bundle problem - proper METSDSpaceSIP support in both deposit and update proper authentication for accessing actionable bitstreams (i.e. those that can be replaced via sword), tightened security options around mediated actions, and add extra security to the access of descriptive documents (deposit receipts, statements) - more configuration options: bundles to expose in Statements, DepositMO extensions (for individual files), and many more - some general refactoring - addition of 404 responses where necessary - better support for add/replace of metadata, and how metadata updates are handled on archived items - update to latest version of Java Server library - new bitstream formats in the bitstream registry In order to use this module, we also need to push a new version of the Java Server library for SWORdV2 into the central maven repo ( <a href="https://github.com/swordapp/JavaServer2.0">https://github.com/swordapp/JavaServer2.0</a> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | richard-jones | 2013-10-16           | 2013-10-16           | null     | clean | YES   pre-approved to merge | feature | author is committer, and is welcome to merge the code           |
| <a href="https://github.com/dspace/dspace/pull/222">https://github.com/dspace/dspace/pull/222</a> | DS-1028 Implement ation of CAS (Single Sign-On) authentication for DSpace                                                                                                          | The first patch was formerly implemented by Kaboré Wendin-Malegdé Patrick at JIRA ( <a href="https://jira.duraspace.org/browse/DS-1028">https://jira.duraspace.org/browse/DS-1028</a> ). This first version was done for DSpace 1.7.2, afterwards user kgunn at JIRA did some arrangements to make it work with DSpace 1.8.2 and CAS 3.1.x and now I've been able to make a 'remix' of both solutions to make it work with DSpace 3.1 and CAS 3.5.x. Hopefully, this patch will be officially implemented in subsequent DSpace versions as an additional authentication method.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | nkneumann     | 2013-05-22T21:10:21Z | 2013-10-03T23:45:07Z | null     | clean | YES   pre-approved to merge | feature |                                                                 |
| <a href="https://github.com/dspace/dspace/pull/205">https://github.com/dspace/dspace/pull/205</a> | [DS-1519] Workflow and submission process selection based on community hierarchy                                                                                                   | The main goal of this patch is to be able to define a submission process, a form definition, or a workflow process, based also on community's handles, allowing subcommunities and collections to inherit those definitions. This patch changes the lookup process in order to check for collection's handle first, and then for its parent community's handle if the first didn't match any definition. This is the same for form definitions (input-forms.xml), submission processes (item-submission.xml) and workflow processes (workflow.xml). According to this, it was also modified the attribute's name used to bound a definition to a handle: before it was "collection" or "collection-handle", now it's just "handle" (old attribute names are still supported for compatibility). This would need to be documented properly. I'd like to hear your thoughts on this                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | nesovi        | 2013-03-13T19:32:36Z | 2013-08-19T14:24:29Z | null     | clean | YES   pre-approved to merge | feature |                                                                 |

| <a href="https://github.com/dspace/dspace/pull/78">https://github.com/dspace/dspace/pull/78</a>   | DS-1252 Initial contribution: (JSP) UI Import from bibliographies database /formats | This contribution add to the DSpace the ability to import from the major bibliographic database both online than local (file based). Out-of-box it provides plugins to import from: - DOI via crossref API - PubMedID via webservices - ArXiv - local BibTeX files - local files in ISI Plain text format Support for additional providers can be easily implemented, the import is done via UI (currently only the JSPUI is supported but extension to XMLUI should be an easy task for any XMLUI experts). The feature can be turned on/off in configuration, the available plugins are also configured via dspace.cfg. Mapping from the import format (CrossRef, PubMed, etc.) to your local DSpace metadata is done in external properties files in config/crosswalk (standard mapping is provided). In mapping files you can define different mapping rule basing on the destination collection (dspace form name) and origin "type" (for example in bibtex you have: @chapter, @book, etc.) Additional hacks for alter the imported values after the initial import or add other values automatically are provided (see the SanitizeImportedMetadata and the EnhanceImportedMetadata interfaces). Please note that the BibTeX importer use the javabib library (GPL) that can be found here: <a href="http://code.google.com/p/javabib/source/browse/#svn%2Ftrunk%2FReleases%2F20040801">http://code.google.com/p/javabib/source/browse/#svn%2Ftrunk%2FReleases%2F20040801</a> <a href="http://dev.davidsoergel.com/nexus/content/groups/public/com/javabib/javabib-bin/">http://dev.davidsoergel.com/nexus/content/groups/public/com/javabib/javabib-bin/</a> if you want to install them in your local maven repository you can use the following command mvn install:install-file -Dfile=javabib-bin.jar -DgroupId=com.javabib -DartifactId=javabib-bin -Dversion=20040801 -Dpackaging=jar | abollini  | 2012-08-29T10:17:17Z | 2013-08-19T14:24:25Z | null     | dirty | NO   unmergeable           | feature |                                                |
