Default Dublin Core Metadata Registry

contribut or		A person, organization, or service responsible for the content of the resource. Catch-all for unspecified contributors.		
contribut or	advisor	Use primarily for thesis advisor.		
contribut or ¹	author			
contribut or	editor			
contribut	illustrator			
contribut	other			
coverag e	spatial	Spatial characteristics of content.		
coverag e	temporal	Temporal characteristics of content.		
creator		Do not use; only for harvested metadata.		
date		Use qualified form if possible.		
date ¹	accessioned	Date DSpace takes possession of item.		
date ¹	available	Date or date range item became available to the public.		
date	copyright	Date of copyright.		
date	created	Date of creation or manufacture of intellectual content if different from date.issued.		
date ¹	issued	Date of publication or distribution.		
date	submitted	Recommend for theses/dissertations.		
identifier	Submitted	Catch-all for unambiguous identifiers not defined by qualified form; use identifier other for a known identifier common to a local collection instead of unqualified form.		
identifier	citation	Human-readable, standard bibliographic citation of non-DSpace format of this item		
identifier	govdoc	A government document number		
identifier	isbn	International Standard Book Number		
identifier	issn	International Standard Serial Number		
identifier	sici	Serial Item and Contribution Identifier		
identifier	ismn	International Standard Music Number		
identifier	other	A known identifier type common to a local collection.		
identifier	uri	Uniform Resource Identifier		
descripti on ¹		Catch-all for any description not defined by qualifiers.		
descripti on ¹	abstract	Abstract or summary.		
descripti on ¹	provenance	The history of custody of the item since its creation, including any changes successive custodians made to it.		
descripti on ¹	sponsorship	Information about sponsoring agencies, individuals, or contractual arrangements for the item.		
descripti on	statementofrespons ibility	To preserve statement of responsibility from MARC records.		

descript of biolochorists of ablochorists of a given team. descript of contents of a given team. descript of contents of contents for a given team. format of content of contents of contents for a given team. format of content of contents of c							
on Catch-all for any format information not defined by qualifiers. format* otente Size or duration. format* neathur Physical medium. format* minetype Registered MIME type identifiers. languag andium Physical medium. languag catch-all for non-ISO forms of the language of the item, accommodating harvested values. relation Catch-all for non-ISO forms of the language of the item, accommodating harvested values. relation Entity responsible for publication, distribution, or imprint. relation Entity responsible for publication, distribution, or imprint. relation Isomatol References according to language of intellectual content, including country codes (e.g. *en_US*). relation Isomatol References according to language of intellectual content, including country codes (e.g. *en_US*). relation Isomatol References according to language of intellectual content, including country codes (e.g. *en_US*). relation Bayanton References specially or logically contained thems. relation Bayanton References physically or logically contained item. relation References source is required to support function, delivery, or	descripti on	tableofcontents	A table of contents for a given item.				
format extent Size or duration. format medium Physical medium. format minetype Registered MIME type identifiers. language in minetype Carch-all for non-ISO forms of the language of the item, accommodating harvested values. language is in minetype Carch-all for non-ISO forms of the language of intellectual content, including country codes (e.g. 'en_US'). language is in minetype Carch-all for references to other related items. relation Isomatol References additional physical form. relation in sport in particular or sport in particular i		uri	Uniform Resource Identifier pointing to description of this item.				
format medium Physical medium. format* mimetype Registered MME type identifiers. language all groups cach-all for non-ISO forms of the language of the item, accommodating harvested values. language all groups second and including country codes (e.g. "en_US"). language all groups cach-all for non-ISO forms of the language of intellectual content, including country codes (e.g. "en_US"). relation including country codes (e.g. "en_US"). relation </td <td>format1</td> <td></td> <td>Catch-all for any format information not defined by qualifiers.</td>	format1		Catch-all for any format information not defined by qualifiers.				
formate minetype Registered MIME type identifiers. language of language catch-all for non-ISO forms of the language of the item, accommodating harvested values. language of language language of memory of the language of intellectual content, including country codes (e.g. "en_US"). language language current ISO standard for language of intellectual content, including country codes (e.g. "en_US"). publisher current ISO Standard for language of intellectual content, including country codes (e.g. "en_US"). relation Isomation Catch-all for released of the publication, distribution, or imprint. relation Isomation References additional physical form. relation Isomation References and number within that series, if available. relation Isosatof References physically or logically contained item. relation Isosatof References share version. relation Isosatof References share version. relation References Source. relation References May receeding item. relation References May receeding item. relation Isosatoda References succeeding item. relation Isomatical	format1	extent	Size or duration.				
language e Catch-all for non-ISO forms of the language of the item, accommodating harvested values. e e Secondary of Language of Intellectual content, including country codes (e.g. "en_US"). publisher ef e Entity responsible for publication, distribution, or imprint. relation I control of Entity responsible for publication, distribution, or imprint. relation I sometic of Entity responsible for publication, distribution, or imprint. relation I sometic of Entity responsible for publication, distribution, or imprint. relation I sometic of Entity responsible for publication, distribution, or imprint. relation is part of Entity (explain) References additional physical form. relation is part of Entity (explain) References and number within that series, if available. relation is proposed in a References source author version. References sealer version. relation is proposed in a References later version. References source. relation is proposed in a References source as required to support function, delivery, or coherence of Item. relation is proposed in a References source in required to support function, delivery, or coherence of Item. relation is proposed in a References source and reproduction. relation in proposed in a References sourceeding Item. relation in proposed in a Refere	format	medium	Physical medium.				
e Image and language Image and language Image and language Image and language Image and intellectual content, including country codes (e.g. 'en_US'). publisher publisher Intelligent of Entity responsible for publication, distribution, or imprint. relation Isomated References to other related items. relation Isomated References additional physical form. relation Ispated References serial version. relation Ispated References stater version. relation Ispated References stater version. relation requires References sucree discource. relation replaces References sucree discource. relation replaces References sucree ding item. relation ispate publication References sucree governing use and reproduction. right	format1	mimetype	Registered MIME type identifiers.				
e* Interpretation of the publication of the problemation of the problematic of the prob			Catch-all for non-ISO forms of the language of the item, accommodating harvested values.				
relation Catch-all for references to other related items. relation isformatof References additional physical form. relation ispantof References physically or logically containing item. relation ispantof References physically or logically containing item. relation haspart References physically or logically contained item. relation haspart References physically or logically contained item. relation haspart References seaffier version. relation hasversion References later version. relation isbaedon References seartier version. relation isbaedon References source. relation requires References source required to support function, delivery, or coherence of item. relation requires References praceeding item. relation isreferencedby References succeeding item. relation isreferencedby References succeeding item. relation isreferences References References		iso	Current ISO standard for language of intellectual content, including country codes (e.g. "en_US").				
relation isformatof References additional physical form. relation ispartof References physically or logically containing item. relation haspart References physically or logically containing item. relation haspart References antier version. relation hasversion References actier version. relation isbasedon References later version. relation isbasedon References bource. relation relation Pointed to by referenced resource. relation relation Referencedby Pointed to by referenced resource. relation replaces References proceeding item. relation replaces References proceeding item. relation is replacedby References source is required to support function, delivery, or coherence of item. relation is replaced Resource is required to support function, delivery, or coherence of item. relation is replacedby References succeeding item. relation in it is replacedby References succeeding item. relation is replacedby References succeeding item. relation in it is replaced by References succeeding item. relation in it is replaced by References succeeding item. relation in it is replaced by References succeeding item. relation in it is replaced by References succeeding item. relation in it is replaced by References succeeding item. relation in it is replaced by References succeeding item. relation in it is replaced by References succeeding item. relation in it is replaced by References succeeding item. relation in it is replaced by References it is required to support in item. relation in it is relation in item. relation in it is relation in item. relation in item. relation in items.	publisher 1		Entity responsible for publication, distribution, or imprint.				
relation ispartof References physically or logically containing item. relation ispartof References physically or logically containing item. relation haspart References physically or logically contained item. relation haspart References active version. relation hasversion References active version. relation ispared Referenced Pointed to by referenced resource. relation required Referenced Resource is required to support function, delivery, or coherence of item. relation replaces References proceeding item. relation is replaced References succeeding item. relation is replaced References succeeding item. relation in item Resource Identifier for related item rights I rems governing use and reproduction. rights I rems governing use and reproduction. rights I rems governing use and reproduction. source I on on use; only for harvested metadata. source I in Do not use; only for harvested metadata. subject Classification Catch-all for value from local classification system. Global classification systems will receive specific qualifier subject I catch Library of Congress Classification Number subject I catch Library of Congress Subject Headings subject I catch Library of Congress Subject Headings subject I catch Library of Congress Subject Headings subject I title I statement/ititle proper. Title statement/ititle proper.	relation		Catch-all for references to other related items.				
relation' ispartolseries Series name and number within that series, if available. relation haspart References physically or logically contained item. relation basyersion References earlier version. relation hasversion References later version. relation ispassedon References source. relation aguires Referenced resource is required to support function, delivery, or coherence of item. relation replaces References succeeding item. relation is replacedby References succeeding item. relation uri References Uniform Resource Identifier for related item rights Terms governing use and reproduction. rights uri References terms governing use and reproduction. source uri Do not use; only for harvested metadata. source uri Do not use; only for harvested metadata. subject dads Dewey Decimal Classification Number subject loc Library of Congress Subject Headings subject loc Library of Congress Subject Headings subject of the Library of Congress Subject Headings Terms of t	relation	isformatof	References additional physical form.
