University of New South Wales - Generate final data output for fedora storage in Cool URL format

Use Case 4 - Generate final data output for fedora storage in "Cool" URL format

Title	Generate final data output for fedora storage in "Cool" URL format
Primar y Actor	Researcher
Scope	
Level	

Story	The research project is complete and has produced some final data that needs to be stored in Fedora. Notably, the final data has been produced from the interim data mentioned in Use case 3. The items to be stored in Fedora are:
	
	• A copy of the data
	• An RDF-based metadata record describing the new data and the research methodology. This will include
	   ○ Relationship between the metadata record and the version 2 of the interim data result created in Use case 3
	   ○ Relationships between the metadata record, the project record and the researchers records
	   ○ Relationships with any external resources, such as related publications and datasets
	
	The URLs of the final data output:
	
	Metadata: http://www.domain.com/resoure/metadata/2137
	
	Data: http://www.domain.com/resoure/data/2138
	
	Note: Improve SOAP/REST API to handle deposit, edit and query final research data outputs.
