University of Virginia - Repository generated-mediated derivatives

Title (goal)	Repository generated/mediated derivatives
Primary Actor	repository manager
Scope	
Level	
Story	A user requests the download of some material from the repository. Based on the metadata for that object, the characteristics of the requesting user the derivative provided to the user contains extra information (context, rights restrictions, etc.). This attachment of functionality to an object in fedora must be integrated into fedora such that: 1. access controls at the repository level are in effect 2. changes to this behavior can be accomplished centrally
