

Session 5 overview notes

Software–Data–Standards (ontology)–One Community

VIVO connects scientists and scholars with and through their research and scholarship. VIVO software is built on VITRO and has had 8 releases in 4 years. VIVO is the only standard way to exchange information about research and researchers across diverse institutions.

VIVO takes complex inputs from multiple institutions and normalizes them to make sense of authority and connections among resources and people.

Q: What is the most difficult field to share research across?

A: Humanities and classics are outliers. There are more materials and data on the science side.
