

Structure - Support for hierarchical metadata formats (e.g. METS / MODS)

Title (Goal)	Structure - Support for hierarchical metadata formats (e.g. METS / MODS)
Primary Actor	End User
Scope	
Level	
Story (A paragraph or two describing what happens)	Users should be able to manage Item (an other DSpaceObject) Metadata when hierarchical in nature. Users should be able to describe "subfields" of a specific field (example: author namepart) Users should be able to define metadata as an "Authority Record" for use in assignment of metadata value to other items. for example, by indexing into Authority Control for selection during "term completion"
