Troubleshooting VIVO Search

If you believe that VIVO contains data, but you can't find any, you may very well have a problem with Solr.

In progress.

Signs of a possible Solr-related problem

- Smoke tests
    - Immediate failures
    - Separate thread, since Solr may start after VIVO
        - Go to the status page. Do you see a successful completion?
            - If not, wait (how long)?
- No content
    - Confirm that this is a Solr problem by navigating through VIVO and finding content.
- Others?

Is Solr working properly?

- Check the admin console.
- See the fields
- See the contents?
- Look in the Solr log

Does it help to rebuild?

- Really clean
    - Solr home directory
    - Tomcat/webapps, Tomcat/work, Tomcat/conf
    - ant clean deploy (or ant all)

Is the communication working?

- Check the VIVO log?
- Check the deploy.properties (both in the log and in the file)

(Recap: look through all of the steps with Mark Ludwig)
