Use Case 1.1 - Search Results page (updates) - Requirements

Use Case 1.1 - Search Results page (updates)

Mockup

Item	Overall Progress	Priority	Developer	Description	Dependencies	Comments
External						
			Lynette R. (Cornell)	Get info about items selected in search results using the existing discovery & access website selection functionality.		Need to implement caching.
Infrastructure – NONE						
Model – NONE						
User Interface						
			Lynette R. (Cornell)	Add combo box with ability to add selected resources to an existing or new virtual collection.	• **Triplestore Model:** Get list of all personal virtual collections a specific user can modify from triplestore. • **UI:** My Virtual Collections page exists. (Requirements | Mockup) • **UI:** New Virtual Collection dialog exists. (Requirements | Mockup) • **External:** Get info about items selected in search results using the existing discovery & access website selection functionality.	Having the ability to create a new collection here may present some challenges since there are two types of collections, i.e. personal and library. See Use Case 1.2 for more info on library virtual collections.
