Setting up a MySQL Database for Fedora

Editor's "To Do" list

- create dedicated sub page dedicated to MySQL setup for Fedora
- edit code block to show connecting to MySQL database server
- add notes for users to know what needs to be adjusted for customizing (i.e. [your-mysql-user])

To setup the MySQL Database for Fedora...

Assuming MySQL database software is currently installed, execute the following:

```
$ mysql -u [your-mysql-user]
mysql> create database [fedoradatabase];
mysql> GRANT ALL ON [fedoradatabase].* TO [fedoradbuser] IDENTIFIED BY [password];

mysql> flush privileges;
mysql> exit
```

Customizing your MySQL setup

Be sure to change:

- [your-mysql-user] to whatever MySQL User you use to manage your MySQL installation
- [fedoradatabase] to the name of the database Fedora will use to store its data
- [fedoradbuser] to the MySQL User that Fedora will use to manage the its data
- [password] to the password that [fedoradbuser] will use to connect to [fedoradatabase]
