

# Islandora Video.js

## Overview

An Islandora viewer module using [Video.js](#).

## Dependencies

- [Islandora](#)
- [Tuque](#)
- [Video.js](#)

## Configuration

Select the Video.js viewer at Administration » Islandora » Solution pack configuration » Video Solution Pack (admin/islandora/solution\_pack\_config/video).

VIEWERS

Select a viewer

DEFAULT	LABEL	DESCRIPTION	CONFIGURATION
<input type="radio"/>	None	Don't use a viewer for this solution pack.	
<input type="radio"/>	JW Player	JW Player for audio and video.	
<input checked="" type="radio"/>	video.js player	video.js for video.	

Preferred viewer for your solution pack. These may be provided by third-party modules.

## Troubleshooting/Issues

The Video.js directory must be installed as the directory name "video-js" in the Drupal library directory. If you see HTTP 404 errors for "//video.js" that means Drupal has not found the "video-js" folder.

HTTP 404 errors for "video.js.map" is a [known issue](#) (the JavaScript Source Map is not included in the distribution). You can stop the video.js client from requesting the video.js.map by removing "//@ sourceMappingURL=video.js.map" from the bottom of the video.js file.
