Meetings

04/13

Sprint planning

- Nianli will only be available part-time this sprint
    - Will creat

        - Unable to locate Jira server for this macro. It may be due to Application Link configuration.

    - Will look

        - Unable to locate Jira server for this macro. It may be due to Application Link configuration.

04/14

- Nianli's Standup notes:
    - Yesterday: sprint meeting with Andrew, reviewing the JIRA issues, and picking the ones I would like to work on, exchanging some thoughts with
    - Today: create

        Unable to locate Jira server for this macro. It may be due to Application Link configuration.

        , but it appears in wro   candidates for migration
    - Blocker: need move the issue to fedora 4 scrum board, thanks!

04/15

- Nianli's Standup:
    - Yesterday: checking out our existing fedora 3 data model, and pickup some candidates for migration.
    - Today: Will setup the migration-utils, and try to migrate the mass-book data (currently will use small data set first)
    - Blocker: none

04/16

- Nianli's Standup:
    - Yesterday: setup the migration utils, try to migrate the page level data (limit to 2 records), successfully migrated.
    - Today: will try on another photocat data
    - Blocker: none

04/17

- Nianli's Standup
  - Yesterday: try on photocat data, the records was migrated to fedora 4, but item-metadata info was wrong, and item-metadata has duplicated entries. Try on more records, but has errors. Record doesn't have master file, but not sure why throws org.fcrepo.client. FedoraException about error creating resource for master (204 No Content).
  - Today: will try on different data model, and document the testing.

04/20

- Nianli's Standup
  - Last Friday: tried on the development repository, migrated a few records. Stopped due to one master datastream has no content. Suggestion for the migration-utils: should provide the function that start from a particular record, or skip first n number of records. This way we can keep the migration going if there is any records the migration-utils can not process now.
  - Today: Will try on the production repository with different file structure.
  - Blocker: none.

04/21
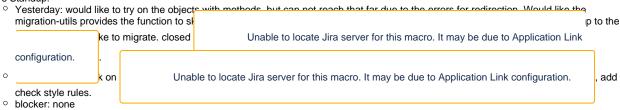

- Nianli's Standup:
  - Yesterday: tried on the production repository for migration. Failed. Discussed with Mike, and documented the error on JIRA. The reason of fails is IU has different datastreamStore structure.
  - Today: Will try on development datastreamStore, and see how the migration-utils process the data with redirection and policy.
  - Blocker: none.

04/22

- Nianli's Standup:
  - Yesterday: tried on development data stream store, some of the redirections were migrated, some weren't. Policy was not migrated correctly. The error info has been documented in the JIRA.
  - Today: Would like try on more data models.
  - Blocker: none

04/23

- Fedora Tech Cal
- Nianli's Standup:
  - Yesterday: would like to try on the objects with methods, but can not reach that far due to the errors for redirection. Would like the migration-utils provides the function to sk p to the ke to migrate. closed   Unable to locate Jira server for this macro. It may be due to Application Link configuration.   .
  -          k on   Unable to locate Jira server for this macro. It may be due to Application Link configuration.   , add check style rules.
  - blocker: none

04/24

- Sprint Wrap-up
- Nianli's standup:
  - Yesterday: working on   Unable to locate Jira server for this macro. It may be due to Application Link configuration.   , add check style rule to pom
  - Today: continue working on   Unable to locate Jira server for this macro. It may be due to Application Link configuration.   .
  - Blocker: may not have time t
