

Admin UI - Reviewers of a submission can change metadata that is not included in the submission form

Title (Goal)	Reviewers of a submission can change metadata that is not included in the submission form
Primary Actor	Administrator
Scope	Workflow
Level	
Story (A paragraph or two describing what happens)	Currently, the "Edit Metadata" step of the review workflow re-uses the submission form. This means reviewers editing the metadata cannot add / edit metadata values that are not included in the submission form. However, the submission form may have been kept to the bare essentials on purpose to reduce the burden on the submitter. Once the item is live, DSpace administrators are free to make whatever changes they wish to the item's metadata; it is unclear why reviewers (perhaps limited to certain roles) cannot do the same during the workflow. Currently, the item would need to be made live in a non-ideal state first, then edited afterwards.
