

# End User - Deposit entire item by email

<b>Title (Goal)</b>	End User - Deposit entire item by email
<b>Primary Actor</b>	End User
<b>Scope</b>	Submission & ingestion process
<b>Level</b>	
<b>Story (A paragraph or two describing what happens)</b>	A librarian has a number of valuable emails that need to be archived in the repository. In order to create an item based on one of these emails, all the librarian needs to do is to forward it to a special email address. After this, the item will automatically be created, with any attached files being stored as bitstreams in the item.
