

Test - Workflow Profile: Upload/Download Roundtrip

Profile for testing the upload and download of large [binaries](#) in a repository.

★ Indicates a timed section.

1. Create a new binary with a specified amount of random data and compute the checksum of the data while uploading. ★
2. Retrieve binary content and compute the checksum of the data while downloading. ★
3. Compare the upload and download checksums to verify data was uploaded and downloaded without error.
