APPENDIX D - SOLR SCHEMA (SEARCH) Term Reference

This section regarding solr fields was out of date and is being re-written.

This page is under construction, but will:

- be based on the de-facto default solr configuration provided by discoverygarden
- explain the difference between string, text, and date field types
- explain how the suffixes (_s, _t, _ms, _mt, ...) map to field types
- provide guidance on which fields (based on their suffixes) are most appropriate when configuring Islandora (result fields, autocomplete, sorting, facets, facet pages, etc.)
