

# Islandora Form Field Panel

## Overview

An alternative to the tabpanels/tabs from the form builder.

## Dependencies

- [Islandora](#)
- [XML Form Elements](#)

## Downloads

[Release Notes and Downloads](#)

Code Repository: [https://github.com/Islandora/islandora\\_form\\_fieldpanel](https://github.com/Islandora/islandora_form_fieldpanel)

## Installation

Install as usual, see [this](#) for further information.

## Configuration

Set up using the same way as you would set up tabs/tabpanels, except interchange with FieldPanel/FieldPane, respectively.

The screenshot shows a configuration interface for the Islandora Form Field Panel. It features a list of three items, each with a 'Name' field, a 'Role' field, and a 'Select a role from this vocabulary' link. Below each item are 'Move Up', 'Move Down', and 'Delete' buttons. At the bottom is an 'Add' button.

Name	Role	Actions
Cary Gordon	Principal	Move Down, Delete
Rain Braw	Project Manager	Move Up, Move Down, Delete
Ashok Modi	Developer	Move Up, Delete

Add

## FAQ

Why the alternative?

It is simply to provide a way to enter data for multi-value fields in a similar fashion to what is offered via the Drupal Field UI. The advantage of the module would be that you can see all the data up-front without needing to click on any tabs. The downside is that you can end up with a lot of scrolling. This module also provides better capabilities to reorder data.

## Known Issues

For the last item in a list, "Move Up" moves it up. For any middle item in a list, "Move Up" may move it down. This is because the initial form Field Panel **H** **AS** to have the name **0**. To ensure it works without javascript, the Move function makes use of a single form element to track what and where you are moving elements.
