

Use Case: Return a graph that has several RDF resources

| | |
|---|---|
| Title (Goal) | Reduce number of LDP GET requests |
| Primary Actor | |
| Scope | |
| Level | |
| Author | Justin Coyne |
| Story (A paragraph or two describing what happens) | If I need 20 objects, I'd rather not make 20 LDP calls. It would be nice to have an API where I could post a list of URIs that I want returned in an RDF graph. |
