## 2016-04-28 Fedora API Extensions Meeting

Date: Thursday April 28 1pm EST (-5 UTC)

- Dial-in Number: (712) 775-7035
  - o Participant Code: 479307#
  - o International numbers: Conference Call Information
  - You may also call in using the <u>VoIP dialer</u> from a web browser, or Android/iOS apps
- IRC:
- Join the #fcrepo chat room via Freenode Web IRC (enter a unique nick)
- Or point your IRC client to #fcrepo on irc.freenode.net

## **Attendees**

- Andrew Woods
- Stefano Cossu
- Nick Ruest
- Jared Whiklo
- Daniel Davis
- Elliot Metsger
- Unknown User (acoburn)
- Ruth Duerr
- Diego Pino Navarro

## Agenda

- 1. New regular meeting time
- 2. IMLS grant for API-X
- 3. Task/Progress tracking
- 4. Merge Aaron B's branch from github
  - a. Note similar pattern of docker containers for Islandora CLAW. Emerging pattern?
- 5. DC Fedora Users Group meeting recap
- 6. Camel-centric architecture?
  - a. Context component might be useful for API-X? Aaron Birkland had a patch accepted this morning
    - i. It appears that the camel-context component is deprecated

## Minutes

- 1. New regular meeting time: Every other Thursday @1pm (Starting with today)
- 2. IMLS grant for API-X:
  - a. JHU received a grant (submitted in Jan) to support development on API-X through December. Deliverables are:
    - i. Public release of the API-X architectures
    - ii. Associated documentation and dissemination
    - iii. Some common interest extensions (validation uc from art institute of chicago)
  - b. This means Aaron will have more time to devote to the development of the API-X
  - c. What constitute a public release?
    - i. (Aaron) The intent is to have a release (to maven-central, etc) in fcrepo-labs on the core components of the architecture and one /two extensions that fulfill the high level requirements set forth by stakeholders.
    - ii. The extensions would be hand picked to be widely valuable within the community
- 3. Task and Progress tracking
  - a. The grants include a low resolution timeline.
  - b. Need to create tickets in JIRA or GitHub
    - i. Create a list of tasks send to SHs
    - ii. Once approve create actual issue in JIRA or GitHub
    - iii. Comparison of JIRA vs GitHub for the issues tracking
    - iv. TODO: Aaron will create a document proposing the initial set of tasks to be circulated amongst the group for ratification
  - c. Once tasks are in GitHub, let's have a meeting (next meeting) to assign tasks to people based on their availability
  - d. Which umbrella does this work live under?
    - i. Currently under fcrepo-labs
    - ii. Under the Duraspace umbrella: a fedora sub-project
      - 1. This work would have its rights. Everyone who works on this would sign a Duraspace CLA
  - e. Who has the authority to accept PRs?
    - i. Aaron B thinks 'anybody' for the time being
- 4. Merging Aaron B's branch from github
  - a. Aaron B will go through and address the comments in place and merge when done.
  - b. Use of Docker; Islandora and Hydra using similar sets of images, in possibly similar wa
  - c. Good opportunity to swap notes, see if/where there is duplication
- 5. Fedora Users Group meeting recap
  - a. Aaron gave half hours presentation on API-X
  - b. Attendees appreciated update, some have been following

- c. Side conversations related to ingest use cases, scalability
- 6. Camel-centric architecture

  - a. Using camel for routingb. Want to be able to characterize costs (e.g. added) latency when evaluating technologies like Camel, identify concerns if they present
  - c. Camel context component allows patterns similar to Stefano's POC, may be something to explore
    i. Aaron B submitted patch for bug back in October, just patched this morning
- ii. Unclear if context component is deprecated. Comment on ticket, but not in code or documentation d. Seems to be similar patterns to CLAW, need to explore more

  7. AOB: Preliminary documents/diagrams to be committed to the document section of the github repo

  8. Next meeting Thu 12 May, 1pm Eastern
