

# Reification in RDF

Here is an ordinary triple:

```
bob a foaf:Person
```

Here is the minimum set of **reified** statements about that triple:

```
someStmt a rdf:Statement
someStmt rdf:subject :bob
someStmt rdf:predicate rdf:type
someStmt rdf:object foaf:Person
```

Here is an example of additional statements that can be made about that original triple, as in the case of building a reified audit model:

```
someStmt aud:writtenOn cal:DateTime
```
