

Logging system to track changes

Logging system to track changes

back up to [User Stories: Defining features and functionality VIVO needs - September 2011](#)

User types involved

Narrative User Story (for sharing/review/voting)

to be written

Background

As more people are allowed to edit the VIVO pages, it would be useful to keep a log of changes that take place on a daily basis.

Wish list for improvement

Every time when a profile is modified through the use of the interface, the system tracks the following information:

1. User
2. Page visited
3. Action
4. Date/time of the change that took place

For example:

```
Oct 18, 2011 4:10:22 PM http://vivo.med.cornell.edu/individual/course-0910advancedbiomedicalsciences
USER: sea9001
ACTION: Modified description
```

Technical considerations

This logging feature may be implemented by adding log.info to the code.

Priority or staging considerations

This was discussed on the [2012-01-05 Development Call](#) and documented in the [Development Call 20120105](#)

The [RDF API](#) will address this for VIVO 1.5
