

RESTful HTTP API - Containers

- GET Retrieve the content of the resource
- POST Create new resources within a LDP container
- PUT Create a resource with a specified path, or replace the triples associated with a resource with the triples provided in the request body.
- PATCH Modify the triples associated with a resource with SPARQL-Update
- DELETE Delete a resource
- HEAD Retrieve the resource headers
- OPTIONS Outputs information about the supported HTTP methods, etc.
- MOVE Move a resource (and its subtree) to a new location
- COPY Copy a resource (and its subtree) to a new location

Request URI: **/path/to/some/resource**

Methods: GET, POST, PUT, PATCH, HEAD, OPTIONS, DELETE, MOVE, COPY

GET

Retrieve the content of the resource

Request Headers:

RANGE

Byte range of content to retrieve, of the form: "Range: bytes=500-999"

ACCEPT

RDF sources support content negotiation with these formats: application/ld+json, application/n-triples, application/rdf+xml, application/x-turtle, application/xhtml+xml, application/xml, text/html, text/n3, text/plain, text/rdf+n3, text/turtle

IF-NONE-MATCH

IF-MODIFIED-SINCE

return=minimal

return=representation

return=representation; include=" **URIs** "

return=representation; omit=" **URIs** "

where minimal indicates that only triples directly related to a resource should be returned, and representation indicates that links to other resources and their properties should also be included. **URIs** is a space-separate list of LDP defined preferences, and also:

URI	Description
http://fedora.info/definitions/v4/repository#EmbedResources	Embed "child" resources in the returned representation
http://fedora.info/definitions/v4/repository#InboundReferences	Include assertions from other Fedora resources to this node (excluded from representation by default)
http://fedora.info/definitions/v4/repository#ServerManaged	Embed server managed properties in the representation (enabled by default)

Not Acceptable (the 'Accept' request-header media type is either invalid or unsupported)

POST

Create new resources within a LDP container

Query Parameters:

CHECKSUM

(Optional - DEPRECATED) A deprecated way of providing a SHA-1 checksum which will be checked against the uploaded content to ensure error-free transfer. This parameter will be removed in a future version of Fedora.

Request Headers:

CONTENT-DISPOSITION

(Optional) The filename provided in the content disposition header will be stored in a `ebucore:filename` property. (See ['Example \(6\): Uploaded file with filename'](#))

CONTENT-TYPE

(Optional) MIME type of the uploaded binary or RDF content, including: `message/external-body` (See ['Example \(2\): Create a new child binary resource with empty content'](#))

If the MIME type corresponds to a supported RDF format or SPARQL-Update, the uploaded content will be parsed as RDF and used to populate the child node properties. RDF will be interpreted using the current resource as the base URI (e.g. `<>` will be expanded to the current URI). Namespaces must be declared in full.

For other MIME types, the uploaded content will be used to create a binary resource.

SLUG

(Optional) A suggested name for the new child resource, which the repository may ignore.

The `slug` you provide does not guarantee the location of the created resource. Clients must check the Location header for the path to the created resource.

DIGEST

(Optional) A way of providing a SHA-1 checksum which will be checked against the uploaded content to ensure error-free transfer. The header is interpreted according to [RFC-3230](#) (See ['Example \(4\): Uploaded file with checksum'](#) and ['Example \(5\): Uploaded file with checksum mismatch'](#)) If the provided checksum does not match the calculated value for the uploaded file a 409 Conflict will be returned.

Create a resource with a specified path, or replace the triples associated with a resource with the triples provided in the request body.

Some resource properties are repository managed and cannot be removed or modified. Any attempt to do so may result in a 4xx error. RDF will be interpreted using the current resource as the base URI (e.g. <> will be expanded to the current URI)

Request Headers:

Response:

```

Note that to prevent conflicts, the value of the `fedora:lastModified` triple in the request must match its current counterpart in the repository. The way to ensure this is to base the changes in a PUT request on the RDF content obtained in an immediately prior GET request, and never try to PUT consecutively, as this will result in a 400 error.

Example (2): Creating a new resource at a specified path

```
curl -i -X PUT "http://localhost:8080/rest/node/to/create"
```

Note that once a resource is created as an RDF or non-RDF source, it must remain an RDF or non-RDF source. In order to change the type of resource, you must DELETE and then re-create the resource.

Example (4): Creating a new binary resource at a specified path redirecting to external content

curl -X GET "http://localhost:8080/rest/some/deleted/resource"
```

```
curl -X DELETE "http://localhost:8080/rest/some/deleted/resource/fcr:tombstone"
