

2017-02-12 VIVO Updates

VIVO 1.9.2 Released VIVO 1.9.2 is a maintenance release addressing several bugs. Upgrading to 1.9.2 should be straightforward, there are no ontology or functional changes. Bugs fixed:

- ORCID integration fixed
- GEMET vocabulary service now uses SSL
- LCSH vocabulary service repaired
- Creation of secondary entities in web interface fixed

You can [get version 1.9.2 here](#). Release notes are [available here](#).

Helping each other The VIVO community has a long history of helping each other. Recently we had two outstanding examples of community members responding with great help:

- In response to a question regarding theming, Asha Vaghela supplied a clear and succinct [description of how this is done in both VIVO 1.8 and VIVO 1.9](#). Thank you Asha!
- In response to a question about how to enable new vocabulary services, Huda Kahn gave a [complete description of how this is done](#). Thank you Huda!

Both responses will be used to improve the VIVO technical documentation.

VIVO Camp Considering VIVO? Planning a VIVO implementation? Need to learn more about VIVO? Maybe you're the new person on an existing project and need to catch up. [Register for Camp here](#). An [itinerary is available](#). Join colleagues leaning about VIVO in Albuquerque, April 6-8. Questions about camp? Drop us a note at info@vivoweb.org

Implementation call this Thursday Considering, planning, working on a VIVO implementation? The [Implementation Interest Group](#) call will be held this Thursday, February 16, at 1 PM EST. Join [Paul Albert](#) with questions and comments regarding your implementation. No previous experience with VIVO or with VIVO calls is needed. We are always looking to help each other. Here's the [WebEx Link](#).

Go VIVO!
