2017-03-16 API Extension Architecture meeting

- Thursday 16 March, 1pm EST (UTC -5)
- Dial-in Number: (712) 775-7035
 - o Participant Code: 479307#
 - o International numbers: Conference Call Information
 - O You may also call in using the VolP dialer from a web browser, or Android/iOS apps
- IRC:
- o Join the #fcrepo chat room via Freenode Web IRC (enter a unique nick)
- Or point your IRC client to #fcrepo on irc.freenode.net

Attendees

- Aaron Birkland
- Ruth Duerr
- Elliot Metsger
- Joshua Westgard
- Andrew Woods
- Jared Whiklo
- Daniel Lamb
- Hanh Vu
- Yinlin Chen
- Daniel Davis
- Unknown User (acoburn)
- Nick Ruest

Agenda

- 1. Updates/progress
 - a. Development on JHU Package ingest extension
 - b. Refactoring demo images to make changing default ports easier
- 2. Adding API-X meeting to community calendar
- 3. Demo 2 TODOs
 - a. Upgrade Amherst services to latest from Maven Central
 - b. Use Amherst's named graph indexer for indexing objects?
 - c. Write triple store demo
 - d. Write package ingest demo
 - e. Write intercepting extension demo
 - f. LDpath demo?

Minutes

- JHU wrapping "package ingest extension" to POST bags to a given container in repo
 - O Uses a streaming-oriented API (e.g. friendly to large chunked uploads, responds immediately with Server-sent events stream
 - O JHU has use cases related to external tools generating bagged resources, transferring into repository for first time
- Elliot Metsger refactored docker configuration of demo images to make it easier to specify alternate ports for API-X, other services
 Christopher Johnson has been developing a suite of tools to support IIIF tools and workflows in Fedora, is using API-X in that suite
- IIIF meeting in Vatican. There is a subset of users that are interested in Fedora and/or API-X
- Amherst moving to v1.1.0 of repository extension services, has improvements to triple indexing as named graphs
- Best for API-X to wait for this release before integrating into docker images
 Amherst triple indexer is more general then fcrepo for various reasons, not a drop-in replacement
 - Named graphs, not built around single-subject constraint
 - O Does not filter by Indexable out of the box, but a user can add whatever filters they like
 - UMD was having heavy load on Fedora while indexing, may appreciate additional control
- Action item: Replace fcrepo-camel-toolbox indexer with Amherst indexer in demo Docker images
 - Want to remove as much internal logic from components (such as triple indexer as possible.
 - Leveraging API-X service binding to filter messages to async processes is compelling use case
 - NASA has multiple indexes, triplestores talking to triplestores, etc
 - API-X helps focus on data rather than technology/implementation details
- Issues wiith Modeshape slowness
- Should put API-X on community calendar
