## Testing Blocker Tickets

1. RC-1

## External Projects

- [Hydra](#)

Project	Tested By	Success?	Notes
ActiveFedora	<a href="#">Esmé Cowles</a>	blocked URL	
CurationConcerns	<a href="#">Esmé Cowles</a>	*	1 test failure, but same failure seen with 4.7.1, 4.7.1-RC-1 and 4.6.1
Hyrax	<a href="#">Esmé Cowles</a>	blocked URL	
Plum	<a href="#">Esmé Cowles</a>	blocked URL	
Sufia	<a href="#">Esmé Cowles</a>	blocked URL	

- [Islandora](#)

## Testing Plan

```
git clone https://github.com/fcrepo4/fcrepo4
cd fcrepo4
git checkout 4.6.2-RC
```

## Sanity Builds

Project	Command	Platform	Tested by	Success?	Notes
fcrepo4	mvn clean install	linux	<a href="#">Andrew Woods</a> <a href="#">Nick Ruest</a>	✔ blocked URL	Ubuntu 16.10 Ubuntu 16.04
fcrepo4	mvn clean install	mac	<a href="#">Jonathan Dixon</a>	blocked URL	MacOS 10.12.2
fcrepo4	mvn clean install	windows	<a href="#">Aaron Birkland</a>	✔	Windows 10
fcrepo-module-auth-rbacl	mvn clean install	linux	<a href="#">Andrew Woods</a> <a href="#">Nick Ruest</a>	✔ blocked URL	Ubuntu 16.10 Ubuntu 16.04
fcrepo-module-auth-rbacl	mvn clean install	mac	<a href="#">Jonathan Dixon</a>	blocked URL	MacOS 10.12.2
fcrepo-module-auth-rbacl	mvn clean install	windows	<a href="#">Aaron Birkland</a>	✔	Windows 10
fcrepo-module-auth-xacml	mvn clean install	linux	<a href="#">Andrew Woods</a> <a href="#">Nick Ruest</a>	✔ blocked URL	Ubuntu 16.10 Ubuntu 16.04
fcrepo-module-auth-xacml	mvn clean install	mac	<a href="#">Jonathan Dixon</a>	blocked URL	MacOS 10.12.2

fcrepo-module-auth-xacml	mvn clean install	windows	Aaron Birkland	✓	Windows 10
fcrepo-module-auth-webac	mvn clean install	linux	Andrew Woods Nick Ruest	✓ blocked URL	Ubuntu 16.10 Ubuntu 16.04
fcrepo-module-auth-webac	mvn clean install	mac	Jonathan Dixon	blocked URL	MacOS 10.12.2
fcrepo-module-auth-webac	mvn clean install	windows	Aaron Birkland	✓	Windows 10
fcrepo-mint	mvn clean install	linux	Andrew Woods Nick Ruest	✓ blocked URL	Ubuntu 16.10 Ubuntu 16.04
fcrepo-mint	mvn clean install	mac	Jonathan Dixon	blocked URL	MacOS 10.12.2
fcrepo-mint	mvn clean install	windows	Aaron Birkland	✓	Windows 10
fcrepo-audit	mvn clean install	linux	Andrew Woods Nick Ruest	✓ blocked URL	Ubuntu 16.10 Ubuntu 16.04
fcrepo-audit	mvn clean install	mac	Jonathan Dixon	blocked URL	MacOS 10.12.2
fcrepo-audit	mvn clean install	windows	Aaron Birkland	✓	Windows 10
fcrepo-webapp-plus	mvn clean install	linux	Andrew Woods Nick Ruest	✓ blocked URL	Ubuntu 16.10 Ubuntu 16.04

fcrepo-webapp-plus	mvn clean install	windows	Aaron Birkland	✓	Windows 10
fcrepo-webapp-plus	mvn clean install -Prbac1	mac	Jonathan Dixon	blocked URL	MacOS 10.12.2
fcrepo-webapp-plus	mvn clean install -Prbac1	windows	Aaron Birkland	✓	Windows 10
fcrepo-webapp-plus	mvn clean install -Prbac1	linux	Andrew Woods Nick Ruest	✓ blocked URL	Ubuntu 16.10 Ubuntu 16.04
fcrepo-webapp-plus	mvn clean install -Pxacml	mac	Jonathan Dixon	blocked URL	MacOS 10.12.2
fcrepo-webapp-plus	mvn clean install -Pxacml	windows	Aaron Birkland	✓	Windows 10
fcrepo-webapp-plus	mvn clean install -Pxacml	linux	Andrew Woods Nick Ruest	✓ blocked URL	Ubuntu 16.10 Ubuntu 16.04

## Filesystem Federation

### Test simple federation

Tested by	Platform	Success?	Notes
Andrew Woods	Linux	✓	Deployed core war with file-connector repository.json
	Mac		

## One-Click Run

```
cd fcrepo-webapp; mvn clean install -Pone-click
```

Command	Platform	Tested by	Success?	Notes
java -jar fcrepo-webapp-4.6.2-SNAPSHOT-jetty-console.jar	Linux	Andrew Woods	✓	Ubuntu 16.10
		Nick Ruest	✓	Ubuntu 16.04
java -jar fcrepo-webapp-4.6.2-SNAPSHOT-jetty-console.jar	Mac			
java -jar fcrepo-webapp-4.6.2-SNAPSHOT-jetty-console.jar	Windows	Aaron Birkland	✓	Windows 10

## Manual Tests

All of the below should take place in the HTML UI and non-vagrant tests should run against **fcrepo-webapp-plus**.

1. Create nested containers
2. Create binary resources
3. Run fixity on binary
4. Update Properties: Perform SPARQL-Update on container
5. Update Properties: Perform SPARQL-Update on binary
6. Delete container
7. Delete binary
8. Use transactions
9. Create versions
10. View versions
11. Rollback versions

## Database Tests

With Tomcat7 deployment, run above manual tests with alternate backend databases ([Configuring JDBC Object Store](#))

Database	Platform	Tested by	Success?	Notes
MySQL	5.7.17	<a href="#">Andrew Woods</a>	✓	
PostgreSQL	9.3.15			

## fcr:backup/fcr:restore Functionality

These tests are designed to ensure the proper function of the 'fcr:backup/fcr:restore' features by testing them against various Fedora configurations. The validity of the 'restore' can only be determined by crawling the repository and verifying the successful retrieval of the repository's content.

If the anticipated Fedora release is not backwards compatible with the previous version of Fedora, then the "From Fedora Version" should be the previous version. Otherwise, it is sufficient to test the fcr:backup/fcr:restore functionality using the same version.

See: [RESTful HTTP API - Backup and Restore](#)

```
# Backup
curl -X POST localhost:8080/rest/fcr:backup

# Restore
curl -X POST -d "/path/to/backup/directory" localhost:8080/rest/fcr:restore
```

## Resources

- These python scripts - [fcrepo-testing](#) - can be used to load RDF content and binary content to a Fedora repository and verify the integrity of the loaded resources. Output from the load process can be used to verify the integrity of a 'restored' repository. See the [README](#) for more info.
- This [script](#) can be used to walk your repository, failing if a non-success response is encountered.

Tested by	Platform	Container (Tomcat /Jetty)	Database Backend	From Fedora Version	To Fedora Version	Number of RDF Resources	Number of Binaries	Size of Backup (du -h .)	Success?	Notes
<a href="#">Andrew Woods</a>	Linux	Tomcat 8	MySQL Ver 14.14 Distrib 5.7.17	4.6.2	4.6.2	100	100	55M	✓	Used <a href="#">plantpatents</a> dataset

NB: "Success" is measured not by receiving a "204 No Content" message after the 'fcr:restore' command, but by performing a GET on every resource in the repository and receiving "200 OK" messages.

## Vagrant Tests

```
vagrant destroy
vagrant up
```

Test steps	Tested by	Success?	Notes
FEDORA_AUTH=true FEDORA_AUDIT=true	<a href="#">Andrew Woods</a>	✓	Using: <a href="https://github.com/whikloj/fedora4-tests">https://github.com/whikloj/fedora4-tests</a>
FEDORA_AUTH=false FEDORA_AUDIT=true	<a href="#">Andrew Woods</a>	✓	Using: <a href="https://github.com/whikloj/fedora4-tests">https://github.com/whikloj/fedora4-tests</a>
FEDORA_AUTH=true FEDORA_AUDIT=false	<a href="#">Andrew Woods</a>	✓	Using: <a href="https://github.com/whikloj/fedora4-tests">https://github.com/whikloj/fedora4-tests</a>
FEDORA_AUTH=false FEDORA_AUDIT=false	<a href="#">Andrew Woods</a>	✓	Using: <a href="https://github.com/whikloj/fedora4-tests">https://github.com/whikloj/fedora4-tests</a>

## Manual Tests

Same as above, plus:

1. Verify audit events are in triplestore
2. Verify resources are in triplestore
3. Verify resources are in Solr
4. Verify authorization works for the two auth-enabled configurations
5. Verify reindexing to triplestore works
