

Search and Browse Update (draft - please comment/edit/improve)

Subject: What are we working on? DSpace 7 development update

As DSpace 7 development progresses we are committed to keeping you in the loop on the functionality currently in development as well as upcoming work.

What are we currently working on?

- The DSpace 7 dev team is tackling the search and browse functionality in the new UI based on Angular 2. You can monitor our progress on the [project board](#) and in [GitHub](#).

What will change? What will stay the same?

- We strive to take advantage of the flexible and innovative Angular UI while ensuring that both the XMLUI and JSPUI functionality you rely on is preserved. *(MM: I wanted to add a real example of such an improvement here, but not sure what's been completed yet - ideas?)* We aim to bring you a basic alpha-level demo of search/browse functionality by [OR2017](#) in June.

How can I make sure DSpace 7 meets my repository's needs?

- Tell us about them! Join the [DSpace 7 UI Outreach Working Group](#) for a bi-weekly review and update of the [Existing Use Cases](#) – or comment/contribute in your own time. [Sign up](#) for the new Slack channel to join the ongoing development conversation.

To receive DSpace 7 updates and ask your questions, subscribe to the [DSpace mailing list](#) updates and [follow DSpacetweets](#) on twitter.
