

# Preparing for Production

- [Configuration \(\\*\)](#)
- [Creating a basic theme \(\\*\)](#)
- [Adding User Accounts \(\\*\)](#)

## Overview

Once you have an initial VIVO running, loaded sample data, and explored the interface, you should be ready to make some choices about your production VIVO.

In this section, we will see the choices that need to be made in [Configuration \(\\*\)](#), [Creating a basic theme \(\\*\)](#), and [Adding User Accounts \(\\*\)](#). Choices will lead to restarting VIVO to confirm things are working as expected, and clearing out data that was created during testing.
