Feature Tour - Action - Update Properties

When viewing a resource, you can add or delete properties using the "Update Properties" form.

The form is conveniently pre-populated with registered namespaces and a skeleton SPARQL update.

To add a new property to the current resource, simply move to the bottom of the form and type in the SPARQL, then click the Update button.

Example: Add a dc:title property to the current resource:

```
INSERT {<> dc:title "My Title" .}
WHERE { }
```

Example: Delete the inserted dc:title "My Title":

```
DELETE {<> dc:title "My Title" .}
WHERE { }
```

Update the inserted dc:title "My Title" to "My Test Title":

```
INSERT {<> dc:title "My Test Title" .} WHERE { };
DELETE {<> dc:title "My Title" .}
WHERE { }
```
