Default group of metadata are automatically activated. Optional groups of metadata or steps can be added

Group of metadata are bound to one primary metadata (author in this example) when a new author is entered all the coupled metadata are presented. Once input the information is showed in a compact form like "tags" in the textarea with some icons to give immediate feedback about the coupled metadata (ORCID, affiliation, etc.). Tags can be reordered with drag&drop, removed or clicking on it open to be further edit

If one of the metadata in a group is filled with a value, for instance because the submission has been imported from an external datasource or is resumed by a previous edit the group will be activated automatically

Mandatory field in an optional group will be required only if the group is active

All the steps are presented as "collapsible panel"
