

First Steps

- [Prerequisites](#)
- [Building Fedora](#)
- [Running the Fedora webapp](#)
- [REST API Examples](#)
 - [Create a new object](#)
 - [Delete an object](#)

This document will walk you through getting the code, building the webapp, and exercising the REST API.

Prerequisites

Fedora requires Java 8 and Maven 3 (only for building the project). Check that you have them installed before proceeding:

```
$ java -version
java version "1.8.0_73"
Java(TM) SE Runtime Environment (build 1.8.0_73-b02)
Java HotSpot(TM) 64-Bit Server VM (build 25.73-b02, mixed mode)

$ mvn -version
Apache Maven 3.3.9 (bb52d8502b132ec0a5a3f4c09453c07478323dc5; 2015-11-10T10:41:47-06:00)
Maven home: /Users/kford1/Programs/apache-maven-3.3.9
Java version: 1.8.0_73, vendor: Oracle Corporation
Java home: /Library/Java/JavaVirtualMachines/jdk1.8.0_73.jdk/Contents/Home/jre
Default locale: en_US, platform encoding: UTF-8
OS name: "mac os x", version: "10.13.6", arch: "x86_64", family: "mac"
```

Building Fedora

You can [download pre-compiled binaries](#) and [run Fedora in an existing Tomcat or Jetty instance](#) or pre-packaged Jetty instances, or build Fedora from source (it's not difficult or time consuming).

Clone the latest code from Github:

```
$ git clone https://github.com/fcrepo4/fcrepo4.git
Cloning into 'fc4'...
remote: Counting objects: 40152, done.
remote: Compressing objects: 100% (12759/12759), done.
Receiving objects: 14% (5622/40152), 3.68 MiB | 912 KiB/s
[...]
```

```
$ cd fcrepo4
```

And build the project (the first time you build Fedora may take some time and bandwidth to download all the development dependencies):

```

$ MAVEN_OPTS="-Xmx1024m -XX:MaxPermSize=256m" mvn clean install
[INFO] Scanning for projects...

[....]

```

Running the Fedora webapp

The webapp can be run from a bundled instance of jetty. The application will listen on port 8080 by default.

If you would like to run the webapp on a different port, you can add the "jetty.port" option in your maven command (e.g. `mvn -Djetty.port=8181 jetty:run`)

```

$ cd fcrepo-webapp
$ MAVEN_OPTS="-Xmx512m" mvn jetty:run
[...]
TRACE 10:50:43.845 (SessionProvider) Returning new Injectablesession...
DEBUG 10:50:43.845 (Injectablesession) Initializing an Injectablesession with SessionFactory org.fcrepo.session.
SessionFactory@5a3c8525.
TRACE 10:50:43.846 (SessionProvider) Returning new Injectablesession...
DEBUG 10:50:43.846 (Injectablesession) Initializing an Injectablesession with SessionFactory org.fcrepo.session.
SessionFactory@5a3c8525.
2013-07-01 10:50:44.027:INFO:oejs.AbstractConnector:Started SelectChannelConnector@0.0.0.0:8080
[INFO] Started Jetty Server
[INFO] Starting scanner at interval of 2 seconds.

```

There's a nice, friendly HTML interface waiting for you at <http://localhost:8080/rest/> (the default username and password is fedoraAdmin)

REST API Examples

The [REST API documentation](#) provides a full listing of the features and functions of the REST API. Here are some examples to get you started:

```

$ curl "http://localhost:8080/rest/" -ufedoraAdmin:fedoraAdmin
@prefix premis: <http://www.loc.gov/premis/rdf/v1#> .
@prefix test: <info:fedora/test/> .
@prefix memento: <http://mementoweb.org/ns#> .
@prefix rdfs: <http://www.w3.org/2000/01/rdf-schema#> .
@prefix webac: <http://fedora.info/definitions/v4/webac#> .
@prefix acl: <http://www.w3.org/ns/auth/acl#> .
@prefix ns001: <http://localhost:8080/rest/ktest/> .
@prefix xsi: <http://www.w3.org/2001/XMLSchema-instance> .
@prefix xmlns: <http://www.w3.org/2000/xmlns/> .
@prefix rdf: <http://www.w3.org/1999/02/22-rdf-syntax-ns#> .
@prefix fedora: <http://fedora.info/definitions/v4/repository#> .
@prefix xml: <http://www.w3.org/XML/1998/namespace> .
@prefix ebucore: <http://www.ebu.ch/metadata/ontologies/ebucore/ebucore#> .
@prefix ldp: <http://www.w3.org/ns/ldp#> .
@prefix xs: <http://www.w3.org/2001/XMLSchema> .
@prefix fedoraconfig: <http://fedora.info/definitions/v4/config#> .
@prefix foaf: <http://xmlns.com/foaf/0.1/> .
@prefix dc: <http://purl.org/dc/elements/1.1/> .

<http://localhost:8080/rest/>
  fedora:lastModified      "2018-05-30T20:51:11.833Z"^^<http://www.w3.org/2001/XMLSchema#dateTime> ;
  rdf:type                 ldp:RDFSsource ;
  rdf:type                 ldp:Container ;
  rdf:type                 ldp:BasicContainer ;
  fedora:writable          true ;
  rdf:type                 fedora:RepositoryRoot ;
  rdf:type                 fedora:Resource ;
  rdf:type                 fedora:Container ;
  ldp:contains             <http://localhost:8080/rest/ktest> ;
  ldp:contains             <http://localhost:8080/rest/91/86/4c/e0/91864ce0-9ad2-49cd-b2c3-
85b0c6b204e5> ;
  ldp:contains             <http://localhost:8080/rest/examples> ;
  ldp:contains             <http://localhost:8080/rest/t1> ;
  fedora:hasTransactionProvider <http://localhost:8080/rest/fcr:tx> .

```

The REST API supports a variety of RDF serialization formats, including:

```
$ curl http://localhost:8080/rest/ -H "Accept: application/rdf+xml" -ufedoraAdmin:fedoraAdmin
<rdf:RDF
  xmlns:rdf="http://www.w3.org/1999/02/22-rdf-syntax-ns#"
