*The DSpace 7 UI Outreach Group is collecting screen shot examples of inspirational UI design and functionality for the different pages of DSpace as a resource for development of the DSpace 7 UI. The overall goal is that DSpace 7 will represent "the best of both worlds" when it comes to unifying XMLUI and JSPUI.*

*But if BOTH JSPUI and XMLUI are lacking in important areas, we're also looking outwards to other systems to see how we can pick low hanging improvement fruit.*

## UI Aspects visible on EVERY PAGES

This includes headers, footers and navs (IF navs are present everywhere)

### Essential features / Links to use cases

...

### Examples

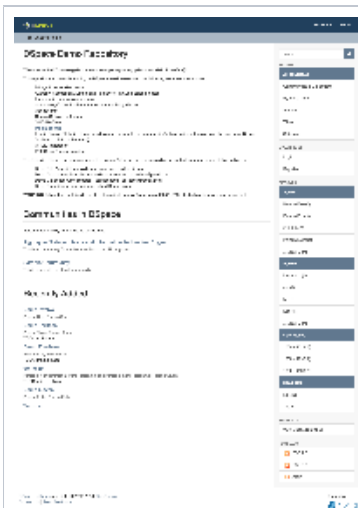

## Homepage

### Essential features / Links to use cases

...

### Examples

Screen shot & Source URL	Individual observations	Joint community opinion

DSpace 6 XMLUI Mirage 2 homepage

Bram Luyten (Atmire)

Main pane

- News => KEEP
- Communities => I personally think they shouldn't be on the homepage. Too cumbersome if list is long
- Recently added

Right nav

- Browse => IN DOUBT ... takes a lot of place, might be cleaner to hide this
- options to login => IN DOUBT ... not sure if this should be BOTH in the header and in the nav
- Discovery facets => IN DOUBT ... are they really useful on the homepage?
- Stats => NOT PROMINENT ENOUGH
- RSS

DSpace 6 JSPUI homepage

Bram Luyten (Atmire)

News => KEEP

Community listing + Discover facets next to eachothers

- => I personally think community list shouldn't be on the homepage. Too cumbersome if list is long

## DSpace-CRIS out-of-box and typical "customization"

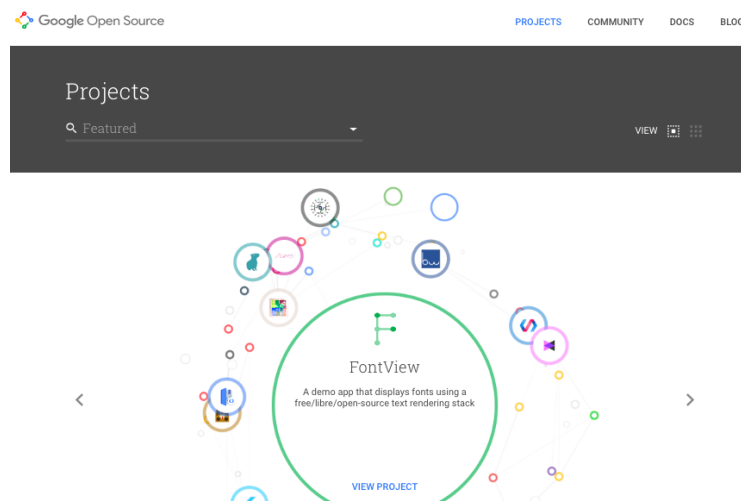

<https://dspace-cris.4science.it/> <http://ktisis.cut.ac.cy/>

## Andrea Bollini (4Science)

- Removed the top community list by default
- More editable html section (head, side & footer)
- central role of the search
- Infographics about virtual aggregation of the repository content (in dspace-cris we have additional entities but it can be also a group by a custom solr query, dc.type, etc.)
- More "list of content": recent submission and most viewed, downloaded
- the navigation bar include links to virtual section of the repository

Typically insitutions use the html editable section to put

- carousel of images / institutional news
- link to other general services (footer)
- often the central panel with the search box and infographics is enlarged to the full row and the additional side news section if used is put on a single middle row

Homepage with animated "carousel" / "discovery thingy"

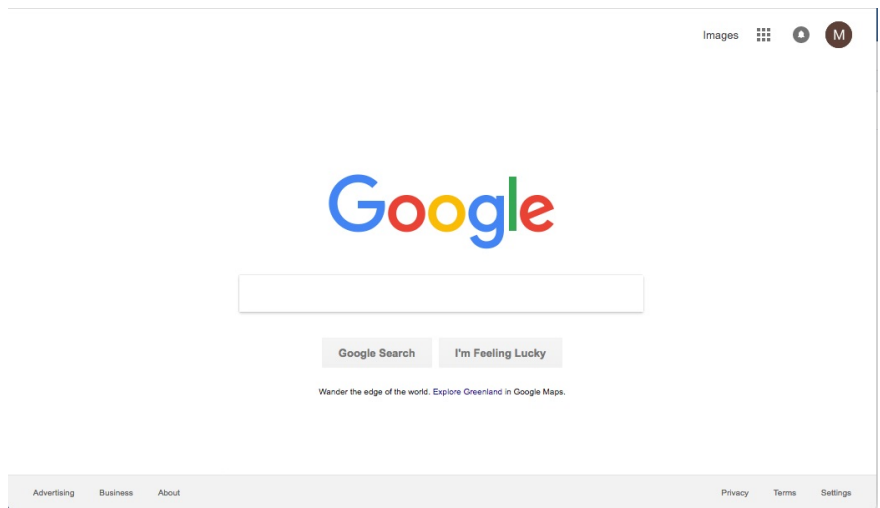

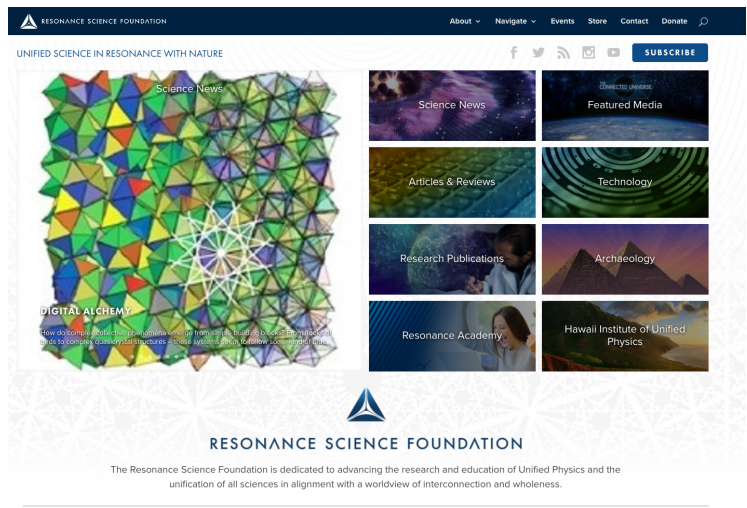

<https://opensource.google.com/projects/explore/featured>

## Bram Luyten (Atmire)

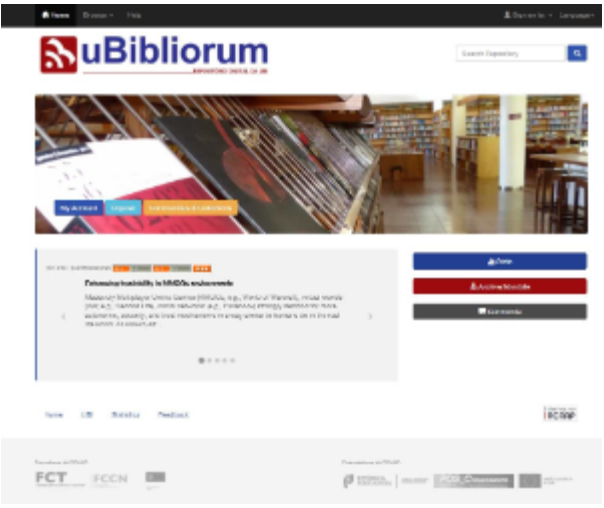

- Visually eye catching section that draws the user to recent /highlighted content
  - In a DSpace context, this could be the thumbnails of recent items, or highlighted items /collections
- Search box that could also function to show the user the (top level) communities. The fact that the box does search "everywhere" by default, but allows you to drill down to a particular topic /community is very nice
- The SEARCH feature & listing of search results seems TOO LIGHT. Only sorting between relevance and name. No facets. I'm convinced we still need facets in DSpace search. Although there's something to say for simplicity as well.

2017 June 7

interesting but not enthusiastic about this viewer

 <p><a href="https://www.google.com/?gws_rd=ssl">https://www.google.com/?gws_rd=ssl</a></p>	<p><b>Monika Mevenkamp</b></p> <p>simple but powerful</p> <p>works for all types of content and repos with mixed content. Princeton has for example no pretty images, lots of journal articles, ETDs, some datasets, ...</p> <p>low maintenance: no manual grooming of featured items - no worries that arithmetically chosen featured items step on anybodies feelings</p> <p>this will live and die with the SEARCH and Filter capabilities on the search results page</p> <ul style="list-style-type: none"> <li>SEARCH could lead to a page that shows a list of results and offers categories to filter results; categories should be configurable: eg <ul style="list-style-type: none"> <li>DataSet show only dc.type = DataSet matches</li> <li>Department show local.custom. department facet to select one or more choices</li> <li>in terms of filtering: draw inspiration from what Blacklight does - or look at WOS search page or ....</li> </ul> </li> <li>the grid up top could lead to a hamburger style menu - collections, submission instructions, news, statistics, ....</li> <li>top right Login or User Logo</li> </ul>	<p>2017 June 7</p> <p>would be a very good customizable option</p>
 <p><a href="https://resonance.is/">https://resonance.is/</a></p>	<p><b>Bram Luyten (Atmire)</b></p> <ol style="list-style-type: none"> <li>CONTENT FIRST <ol style="list-style-type: none"> <li>Left panel: emphasis on recent /highlighted items.</li> <li>Right panel: collections /communities /subjects</li> <li>BELOW: explanation about the system /repository</li> <li>NO SIDEBAR /Clutter left or right</li> </ol> </li> <li>Focus on social in the top level bar</li> </ol>	<p>2017 June 7</p> <p>like how it highlights new items</p> <p>like as an option, but not a default</p> <p>would like it customizable</p>

--	--	--

## Item Listing & Search Results Page

Is search results & item listing completely the same or should we have different designs?

In other words, are there different requirements for let's say, listing items in a "Recently Added" list or a "Browse By" list, compared to how they should be listed as search results?

## Essential features / Links to use cases

#### Abstract

In this paper we describe DSpace&#8482;, an open source system that acts as a repository for digital research and educational material produced by an organization or institution. DSpace was developed during two years' collaboration between the Hewlett-Packard Company and MIT Libraries. The development team worked closely with MIT Libraries staff and early adopter faculty members to produce a 'breadth-first' system, providing all of the basic features required by a digital repository service. As well as functioning as a live service, DSpace is intended as a base for extending repository functionality, particularly to address long-term preservation concerns. We describe the functionality of the current DSpace system, and briefly describe its technical architecture. We conclude with some remarks about the future development and operation of the DSpace system.

JOURNAL OF DISPUTE RESOLUTION

The Journal of Dispute Resolution is a student-edited, academic journal published on a bi-annual basis by the University of Missouri School of Law in cooperation with the Center for the Study of Dispute Resolution. The journal contains articles written by nationally prominent authors and students on a wide variety of topics in the rapidly developing field of dispute resolution.

The Journal was established in 1984 and is recognized as the leading legal publication in the area of alternative dispute resolution. Second- and third-year law students administer the Journal by contributing written notes and assisting in the editing and publication process.

Like the drop down box from which users can choose an issue. Once an issue is chosen, the pdfs are organized under categories - which vary from issue to issue

Examples:

- Front matter
- Conferences
- Notes

 <p>Figshare: <a href="#">Item page link</a></p>	<p><a href="#">Bram Luyten (Atmire)</a></p> <p>Figshare clearly takes the angle that the actual file/pdf is the most important thing the user wants. Above the fold, they only show the file (rendered), with an option to download below.</p> <p>You have to scroll below the fold to get to the metadata.</p>
--	---

## Submission forms

### Essential features / Links to use cases

Submitters should not lose information: explicit or implicit saving

Compatible with the current definition of input-forms.xml, meaning that:

- Different form configurations per collection should remain supported
- Type-bind showing of particular fields should remain supported

### Examples

Screen shot and source URL	Individual Observations	Joint community opinion
Standard DSpace 6 XMLUI submission forms		
Standard DSpace 6 JSPUI submission forms		

## Community page, Collection page, overview

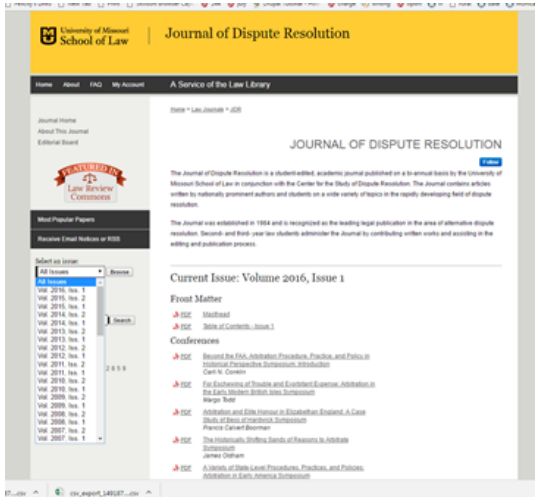

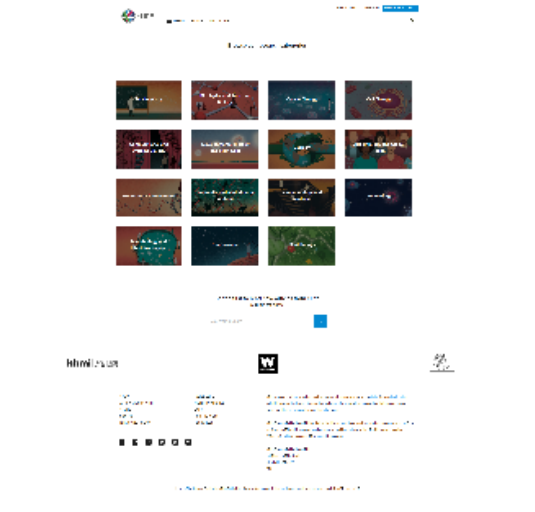

Because a community in DSpace can have many subcommunities, every community can be a tree in itself.

So the challenge to represent ONE community (and its sub communities) is actually very similar to representing ALL top level communities.

## Essential features / Links to use cases

...

## Examples

Screen shot & Source URL	Individual Observations	Joint Community Opinion
 <p><a href="http://scholarship.law.missouri.edu/jdr/">http://scholarship.law.missouri.edu/jdr/</a></p> <p>Digital Commons at University of Missouri Law School</p>	<p><b>Felicity Dykas</b> (Missouri): Like the drop down box from which users can choose an issue. Once an issue is chosen, the pdfs are organized under categories - which vary from issue to issue</p> <p>Examples:</p> <ul style="list-style-type: none"> <li>• Front matter</li> <li>• Conferences</li> <li>• Notes</li> </ul>	
 <p><a href="https://elifesciences.org/subjects">https://elifesciences.org/subjects</a></p>	<p><b>Arthur Smith</b>: Simple categories, visually easy to browse.</p>	

## Author profile

Author profiles are NOT a default feature of DSpace 6 JSPUI or XMLUI. Maybe we should remove this section as a whole, if we're not adding author profiles in DSpace 7.
