

Islandora Badges

Overview

Islandora Badges displays various metrics (and other) badges on objects. Each badge is created by a submodule. Available badges include:

- [Altmetrics](#): display social media interactions
- [Crossref citations](#): Citation counts via Crossref
- [oadoi](#): Provides a link to a fulltext document for objects without a PDF datastream, via the [oadoi.org](#) API (Deprecated as of 7.x-1.11)
- [Scopus](#): Citation counts via the Scopus database
- [Web of Science](#): Citation counts via Web of Science
- [Unpaywall](#): Provides a link to a fulltext document for objects without a PDF datastream, via the [oadoi.org](#) API

Badges will only display on objects that have a MODS datastream and a DOI (digital object identifier). The xpath to the DOI field is configurable.

Dependencies

This module requires the following modules/libraries:

- [Islandora](#)

Downloads

[Release Notes and Downloads](#)

Configuration

Configuration path is admin/islandora/tools/badges (Administration > Islandora > Islandora Utility Modules > Islandora Badges Configuration).

There are two administration fields:

- DOI XPath
 - The XPath to the DOI element e.g. `/mods:mods/mods:identifier[@type="doi"]`
 - A default is included and should serve most repositories, but you can change it if yours is located elsewhere.
 - Identifier attributes are case sensitive. If you would like the XPath to account for both upper and lowercase DOI identifier attributes in MODS records, the following XPath can be used: `/mods:mods/mods:identifier[@type="doi" or @type="DOI"]`

DOI XPath

`/mods:mods/mods:identifier[@type="doi"]`

MODS XPath for retrieving the DOI.

CONFIGURE WHICH CONTENT MODELS WILL DISPLAY BADGES.

☐

CONTENT-MODEL

- Content models
 - Choose which CModels are able to display badges

Enabling Display

In order to display the badge, you'll need to configure the block. The path is admin/structure/blocks (Administration > Structure > Blocks)

Locate the badge you wish to display (e.g. "Islandora Altmetrics Badge") and select the region you want to display it in, and save.

Disabled	
 Development	<div>- None -</div>
 Execute PHP	<div>- None -</div>
 Islandora Altmetrics Badge	<div>- None -</div>

Example: You should then see the badge you selected in the region of choice.
