

Configuring External Vocabularies

- [Overview](#)
- [Configuring the UMLS External Vocabulary Service](#)
- [Notes](#)

Overview

VIVO provides the ability to use external vocabularies to represent the research areas of scholars, and the concepts pertaining to scholarly works. External vocabularies that provide RDF can be used with VIVO. Using an external service, a curator, or page owner may query the external vocabulary for terms, and select terms representing the work or scholar. The terms are fetched from the external service and added to the VIVO triple store. Links from the work or person are added to connect the person or work to the selected term or terms.

See below

The screenshot shows the VIVO web interface. At the top is a dark blue header with the VIVO logo and the tagline "connect • share • discover". To the right of the header are links for "Index", "Site Admin", and "root", along with a search bar. Below the header is a navigation menu with links for "Home", "People", "Organizations", "Research", "Events", and "Capability Map". The main content area is titled "Manage Concepts". It features a table with two columns: "Concept (Type)" and "Vocabulary Source". The table contains one row with the value "Rhetoric" under "Concept (Type)" and a link "Remove" under "Vocabulary Source". Below the table is a section titled "External Vocabulary Services". It contains four radio buttons, each followed by a service name and a brief description:

- ☒ [AGROVOC](#) (Agricultural Vocabulary)
- ☐ [GEMET](#) (GEneral Multilingual Environmental Thesaurus)
- ☐ [LCSH](#) (Library of Congress Subject Headings)
- ☐ [UMLS](#) (Unified Medical Language System)

 Below the radio buttons is a search bar with a "Search Service" button and a link "or [Select or create a VIVO-defined concept.](#)". At the bottom of the section is a link "Return to Profile Page".

Configuring the UMLS External Vocabulary Service

The UMLS External Vocabulary Service is provided by the National Institutes of Health in the United States. They require a username, password, and apikey to use the service. You can get a username, password and apikey at no charge from the NIH. Visit <https://www.nlm.nih.gov/databases/umls.html>

Once you have a username, password, and apikey, create a text file called umls.properties. Your file should look like the one below, with your values for username, password and apikey substituted.

umls.properties

```
username = yourumlsusername
password = yourumlspassword
apikey = yourumlsapikey
```

Place this file in `/api/src/test/resources/umls.properties`

Restart Tomcat

Notes

When external concepts are added to VIVO, they retain their original URI from the external vocabulary. Since we have no way of knowing whether these URIs represent OWL classes or RDF instance data, VIVO does not assert a type for the concepts, which will therefore only be interpreted as being of type `owl:Thing`.

To add a new external vocabulary, see [Adding External Vocabularies](#)
